

**PROJECT 15**

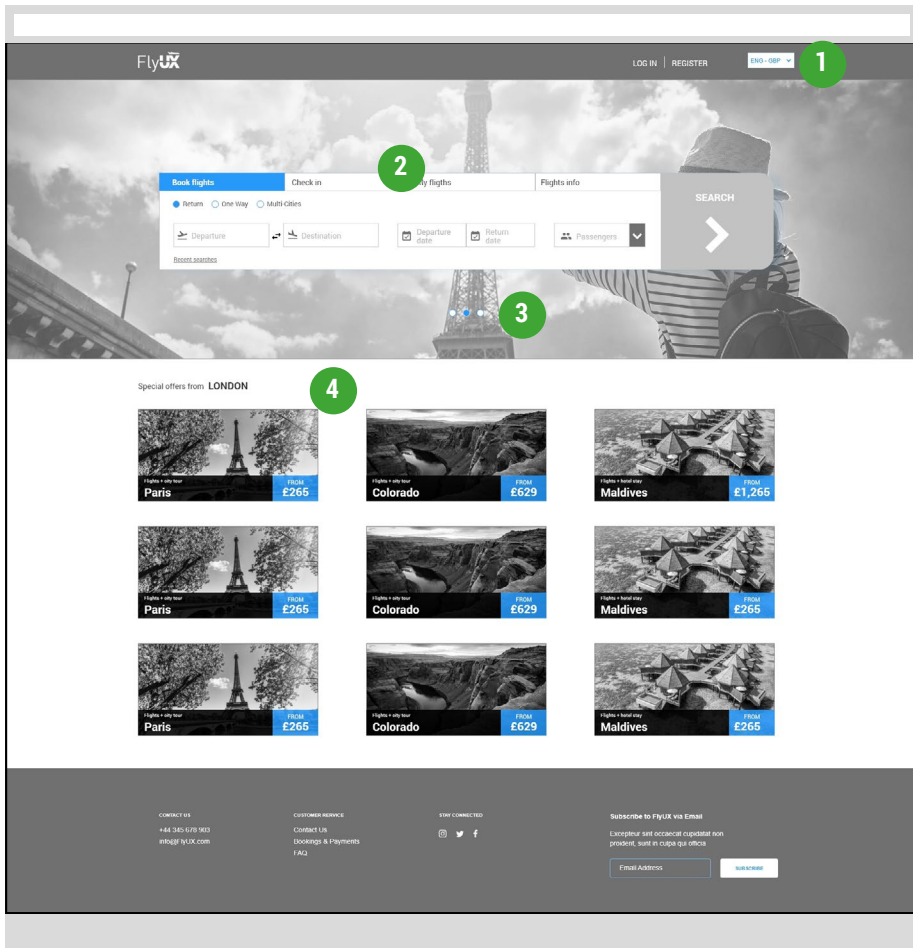

# **WIREFRAMES FOR DESKTOP**

**ALESSANDRO BOARETTO**

## INTRODUCTION

### OBJECTIVES

- Create a set of wireframes following the guidelines shown to you in the video lessons
- Make sure the wireframes contain all the necessary detail a developer would need to build the application accurately
- Develop great material for your portfolio

## HOMEPAGE

## START

### 1. Country and currency widget:

- Automatically set according to the device's IP address (geolocation).
- If triggered, opens list of all available currencies and countries covered by the airline.

### 2. Flight selection widget:

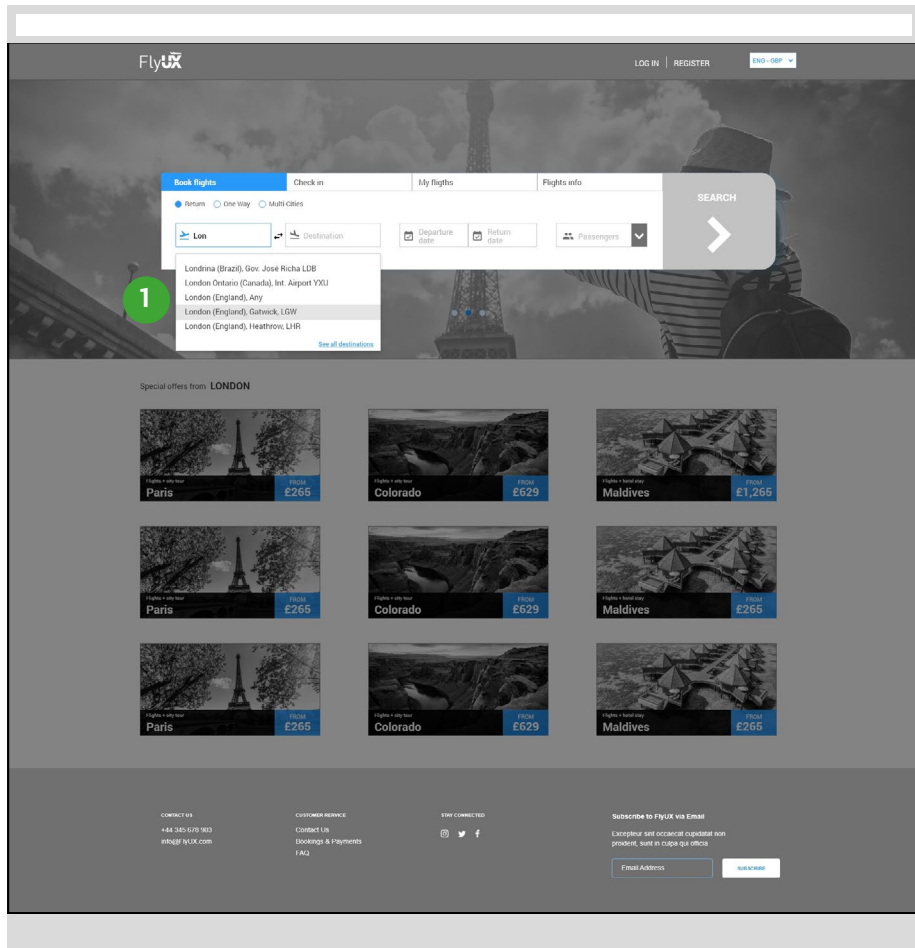

- By default, BOOK FLIGHTS with a RETURN option activated is the starting state.

### 3. Image carousel:

- Promo images revolving every 4,000 milliseconds.

### 4. Local offers:

- Automatically set according to the device's IP address (geolocation). Not clickable.
- Clicking on each offer will open a new screen with package details.

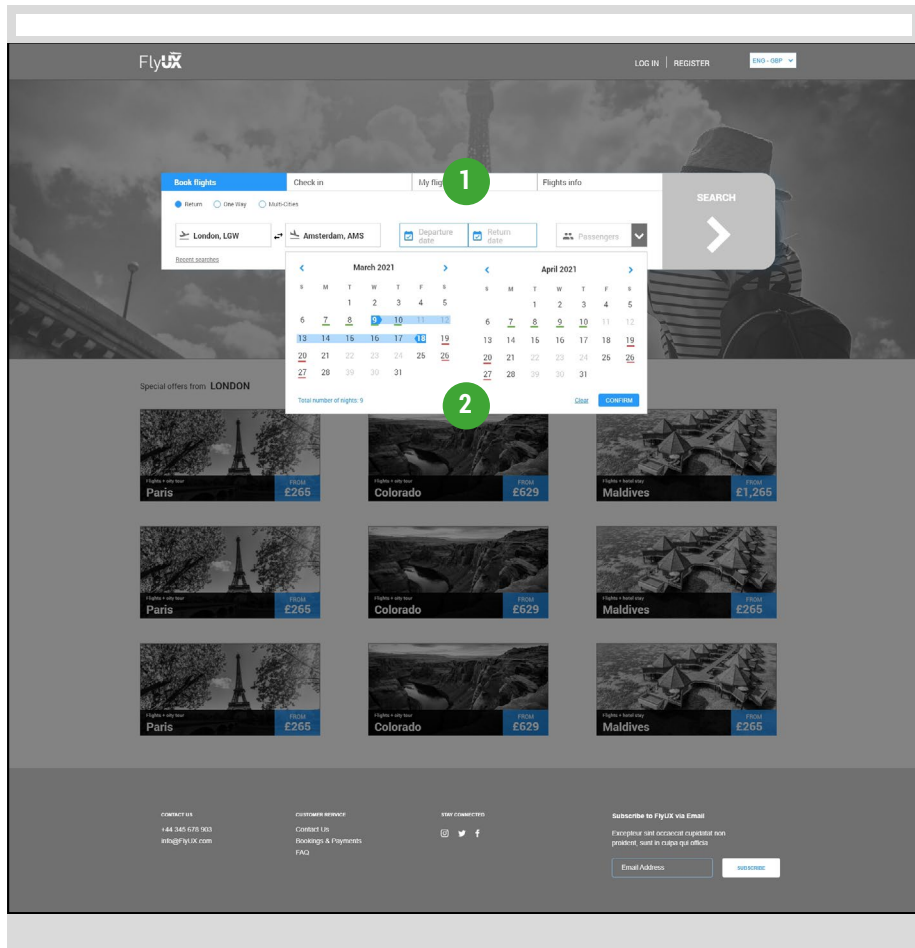

HOMEPAGE

DEPARTURE

## 1. Departure and destination fields:

- Input: text. Default value set by geolocation (E.g., London). User will be able to type any departure and destination.
- Once selected, change field status (active>blue) and add dark overlay on every other element outside the main widget.
- At first digit, open drop down panel.
- After users enters three digits (including City name, Country name, Airport names), populate the drop down list with all potential matches. If no matches are found, then trigger message: No results found, please check all our options.
- Insert option for accessing all available departures (link to).
- Add hover state (grey background) for easy access/selection of the preferred entry.

## HOMEPAGE

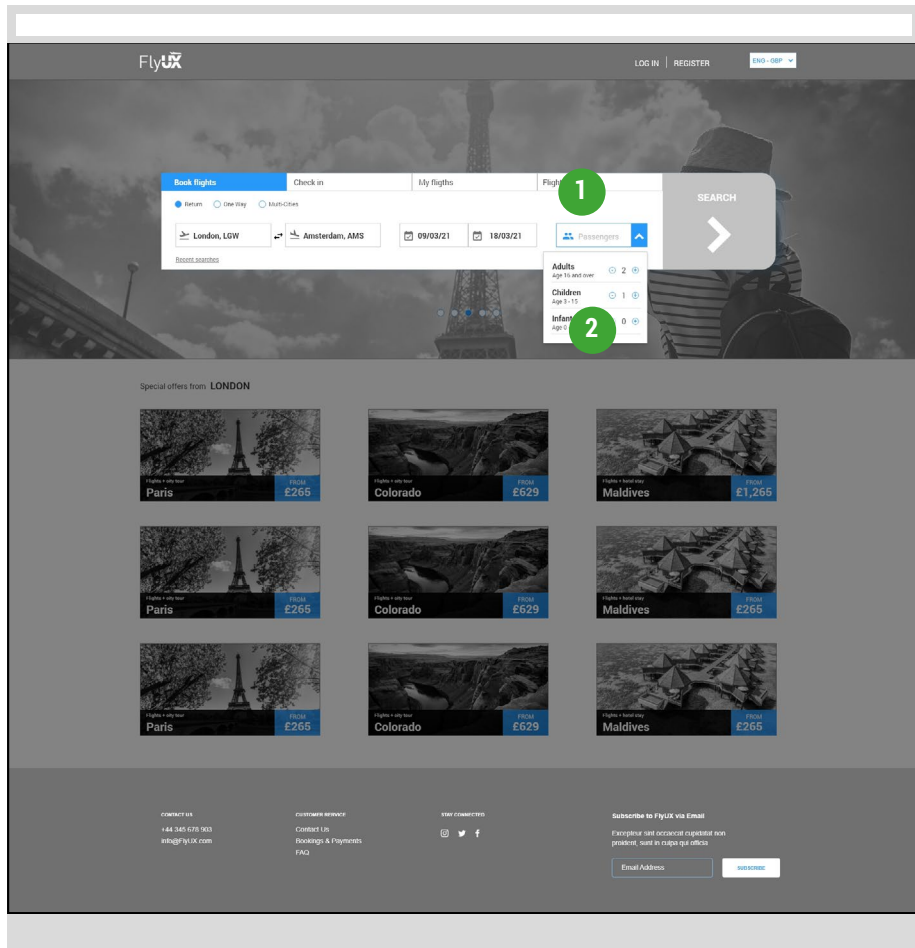

## CALENDAR

### 1. Departure and return dates fields:

- Input: Calendar.
- Once selected, change field status (active>blue) and add dark overlay on every other element outside the main widget.
- Users won't have the ability to type the dates directly.

### 2. Calendar:

- Calendar to display current and +1 months.
- Dates status are: Not available (Grey), Available (Black), Cheap options (Green Underline), Most expensive (Red Underline).
- Selected dates status changes to Blue (plus light blue highlight for the in-between dates).
- Automatic number of nights calculator to be displayed
- If users press CLEAR, delete selection (leave the widget open).
- If dates are not confirmed (via button), don't save details.

## HOMEPAGE

## PASSENGERS

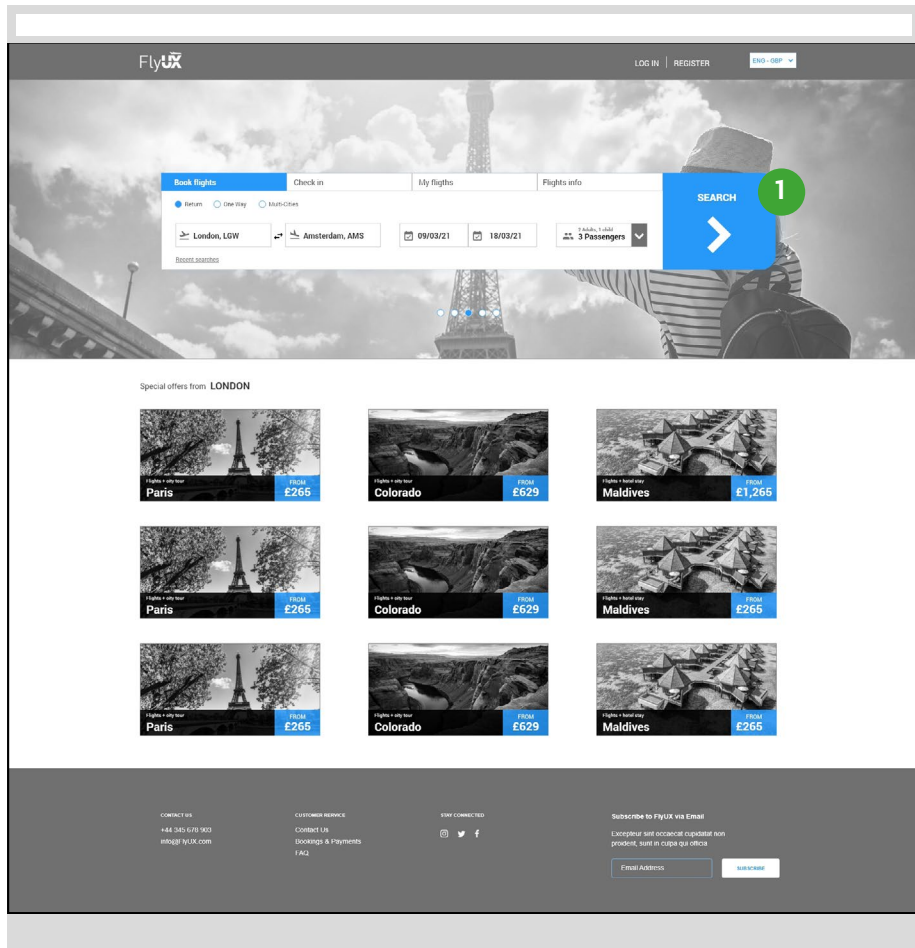

### 1. Passenger field:

- Input: none.
- Once selected, change field status (active>blue) and add dark overlay on every other element outside the main widget.
- Users won't have the ability to type the number of passengers directly.

### 2. Passengers:

- Users to click on the - and + buttons to add passengers.
- Once passengers have been added, by clicking on the Arrow, the widget will display total number of passengers and its breakdown.

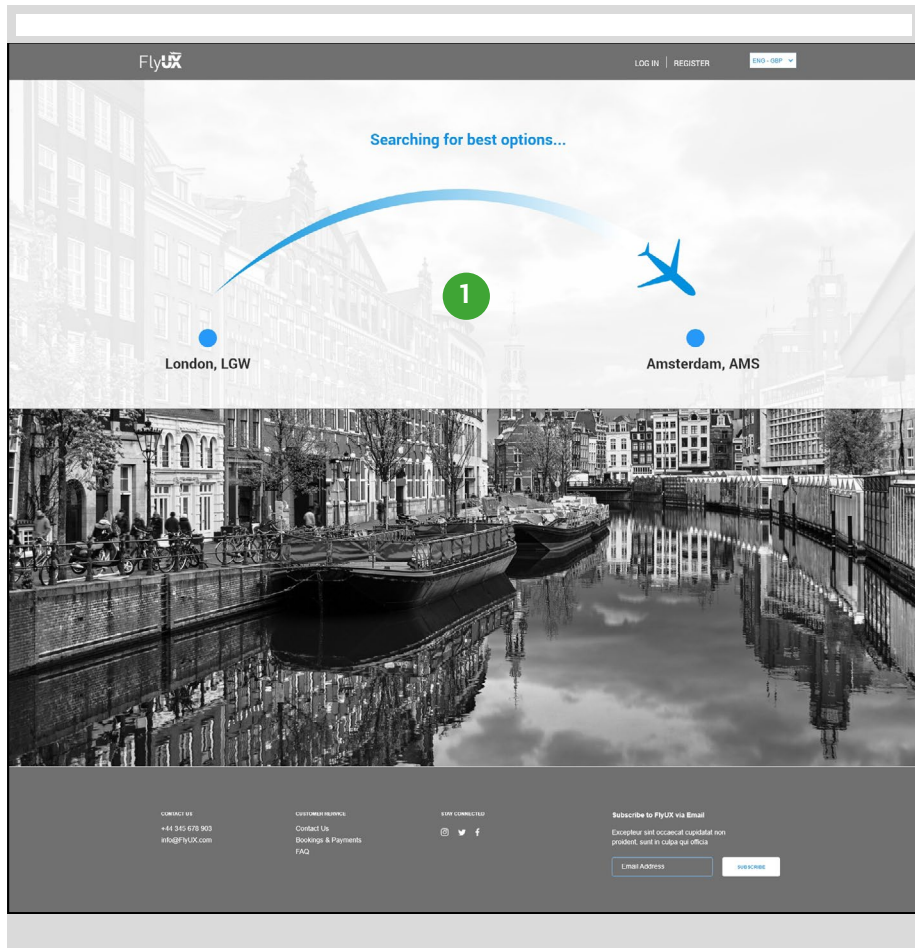

## HOMEPAGE

## CONFIRMATION

### 1. Flights details:

- SEARCH button becomes active and clickable (only when all fields are filled).
- Data in each field is marked as bold.
- If search is clicked (active status), then trigger loading result screen.

## LOADING RESULTS

### 1. Loading results:

- Background image to match city destination (allow JPG and GIF, MP4 formats).
- Airplane icon to animate from departure to destination city, matching the loading time (5,000 milliseconds) before transitioning to the results list.

The screenshot shows the Flytix booking process. At the top, there are navigation steps: Book, Seats, Luggage, Extras, and Payment. The 'Book' step is highlighted with a green circle and the number '1'. Below this, a calendar view shows dates from 6 March to 12 March. The 9th of March is highlighted with a green circle and the number '2'. The flight details for 09 March 2021 are shown, including the route from London Gatwick (LON) to Amsterdam Schiphol (AMS) via Schiphol. The current flight is highlighted with a green circle and the number '3'. The flight details are as follows:

DEPARTURE	DURATION	ARRIVAL	ECONOMY	BUSINESS	PREMIUM
LON Gatwick 06:50 AM CHECK-IN BY 08:00 AM	01h 05M Direct	AMS Schiphol 08:57 AM LOCAL TIME	£107	£138	£182
LON Gatwick 08:50 AM CHECK-IN BY 07:00 AM	05h 05M 1 Stop (Brussels (BRU))	AMS Schiphol 14:57 PM LOCAL TIME	£112	£163	£189
LON Gatwick 10:50 AM CHECK-IN BY 09:00 AM	01h 05M Direct	AMS Schiphol 12:57 PM LOCAL TIME	£122	£158	£182
LON Gatwick 18:50 PM CHECK-IN BY 17:00 PM	01h 05M Direct	AMS Schiphol 20:57 PM LOCAL TIME	£117	£150	£175
LON Gatwick 19:50 PM CHECK-IN BY 18:00 PM	01h 05M Direct	AMS Schiphol 21:57 PM LOCAL TIME	£157	£198	£232

At the bottom, there is a section for discount codes with a text input field and an 'OK' button. Below that, there are contact information and a subscription form for Flytix via email.

## OUTBOUND LIST

## DEFAULT RESULTS

### 1. Booking steps:

- Full map of the steps required in the booking process.
- Current step highlighted (not clickable).

### 2. Flexi dates panel:

- Panel displaying current and - 3, + 3 dates. Current date highlighted.
- Dates mirror calendar panel from [initial search mode](#) (available and not available).
- Clicking on the <> arrows allows user to move between dates.
- Includes [3 Weeks View panel](#).
- Link to access [initial search](#) (current details retained).

### 3. Discount code:

- Input: letters and numbers (no special characters).
- Once selected, change field status (active>blue).
- If code is incorrect, display error message (invalid or expired code) and HINT. If code is correct, update prices (show confirmation message).

## OUTBOUND LIST

## DEFAULT RESULTS

### 1. 3 Weeks View:

- It displays price trends (not clickable) for the period covered (current, past and future week).
- Dates and prices mirror calendar panel from [initial search mode](#) (available/not available, cheapest/most expensive).
- When in OPEN mode, push down all the elements below (flight details, result list, discount code field).

## OUTBOUND LIST

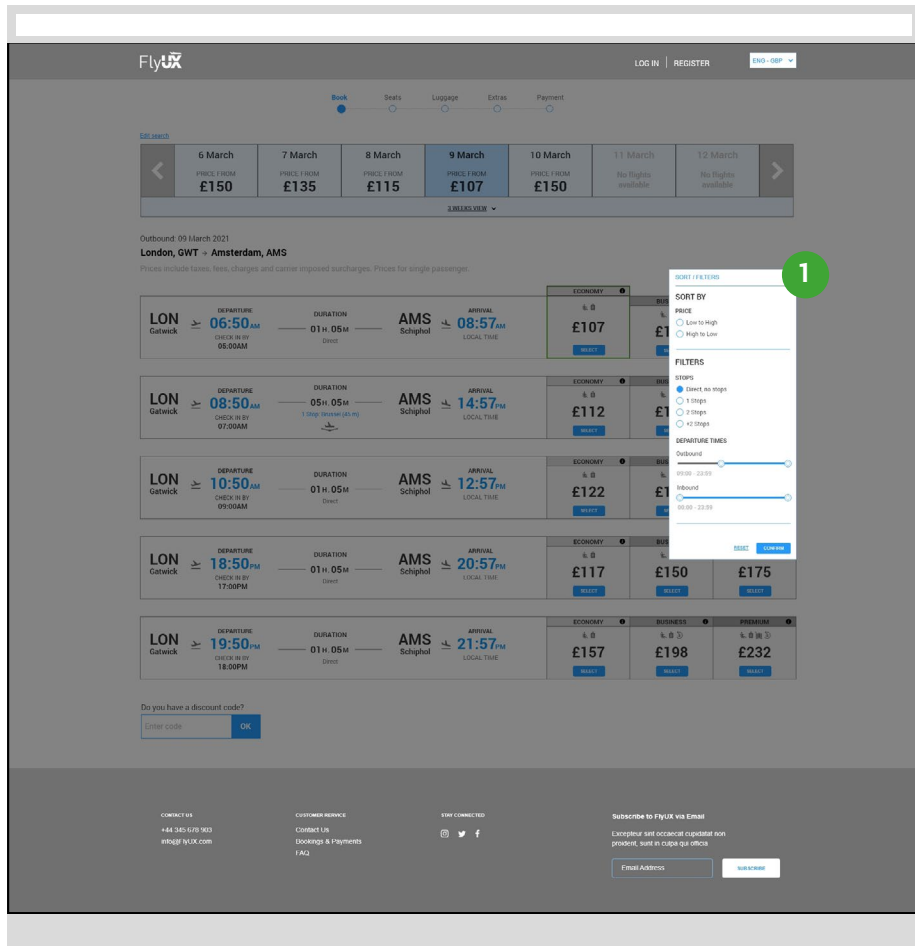

## CABIN BENEFITS

### 1. Cabin benefits:

- Triggered by clicking on each info icon above price options (same content).
- All other areas of the website are masked by a dark overlay.
- Panel closes as users click on the X (top right corner).

### NOTE:

\* future implementation will include the addition of extra text to be added below the table (luggages specs such dimensions, weights, etc., and potentially a key/legend (further UTs needed).

## OUTBOUND LIST

## SORT/FILTER

### 1. Sorting/filtering menu:

- To be vertically centered according to the scrolling position of the user. All other areas of the website are masked by a dark overlay.
- Traditional checkbox for Sorting and Filtering for direct or non direct flight (on/off).
- Dragging elements (toggles) for departure time (to be adjusted in real time according to the user selection).

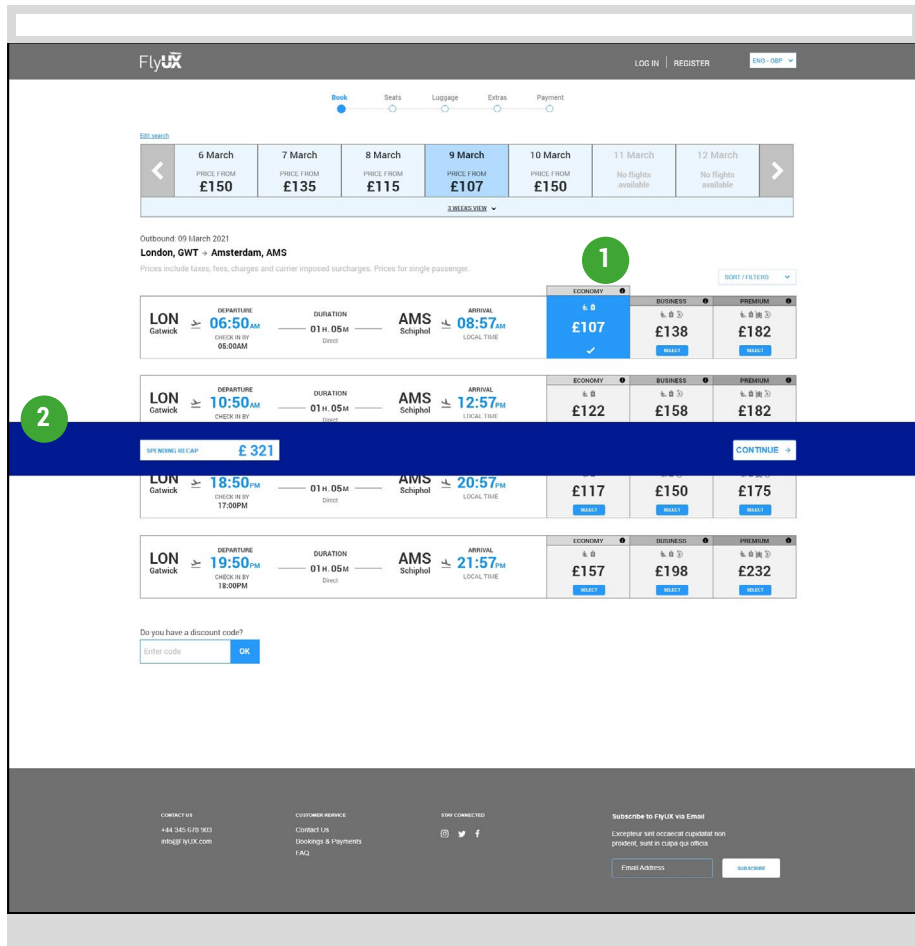

Default

Adjusted/filtered  
outbound time

- Confirming the filtering settings will update the list (panel to close automatically).
- User can set inbound filters on the outbound view, if done so, it filters inbound flights automatically.

## OUTBOUND LIST

## FLIGHT SELECTION

### 1. Price selection:

- If date is selected, trigger selected mode (Blue background, white icons).
- Change SELECT button to check icon.

### 2. Spending recap:

- When outbound flight is selected, trigger spending panel
- Widget to include spending recap for all passengers\* (automatically updated according to selection) and CONTINUE button.

### NOTE:

\* Future implementation will include a drop down panel which will open a detailed breakdown of all spending so far (adults, children, extras, discount code and amount discounted).

## INBOUND LIST

## DEFAULT RESULTS

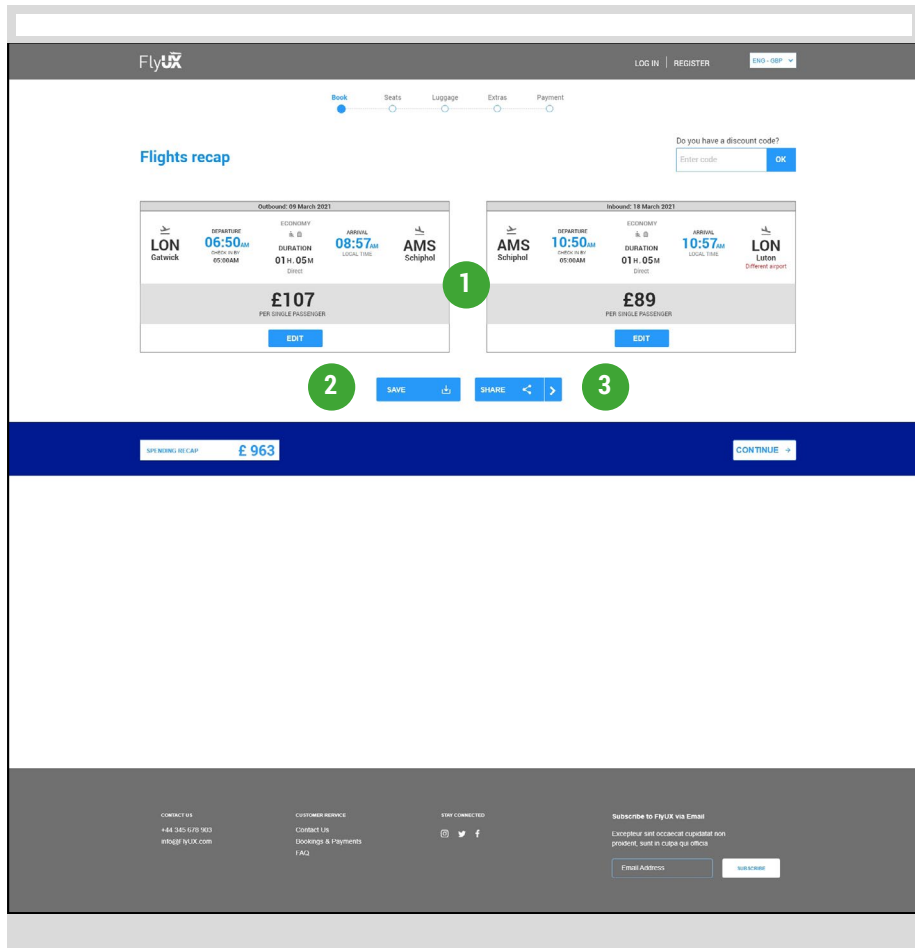

Same features and rules as per outbound list:

### 1. Spending recap:

- Price automatically updated as inbound flight is selected.

### 2. Different return airport:

- If return flight is different from the arrival (outbound) then display hint text (red).

## FLIGHTS RECAP

### 1. Flights recap widgets:

- It displays all selected flights info (departure and arrival times and location, flight durations, cabin and so forth).
- Overall date and departure/destination are displayed on the top section of each widget.
- Edit button will take users to the allocated screen (outbound or inbound) all data is retained.

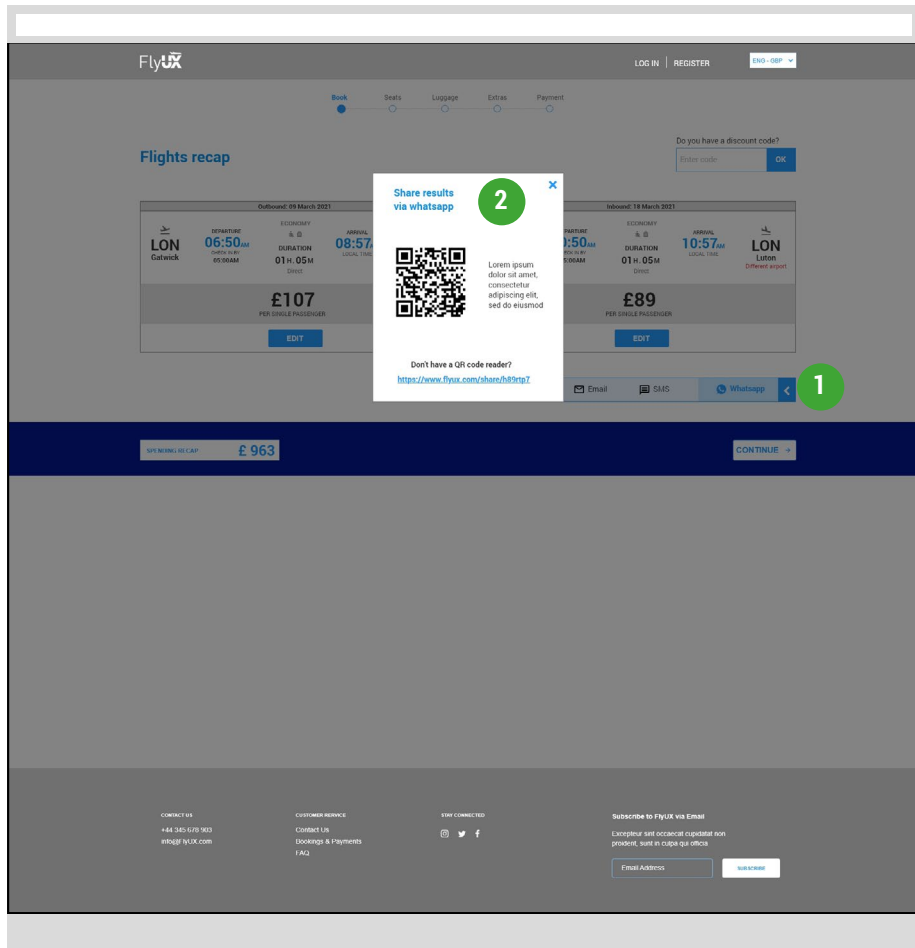

### 2. Save button:

- The button allow registered users to directly save the search (extra charge for freezing the prices modal screen to be triggered).
- For guest users, the system will ask for login details (or sign up) via modal screen (to be designed)

### 3. Share button:

- The button allow registered and guest users to share the results with others (no login required - TBC).

## FLIGHTS RECAP

### 1. Share button (continue):

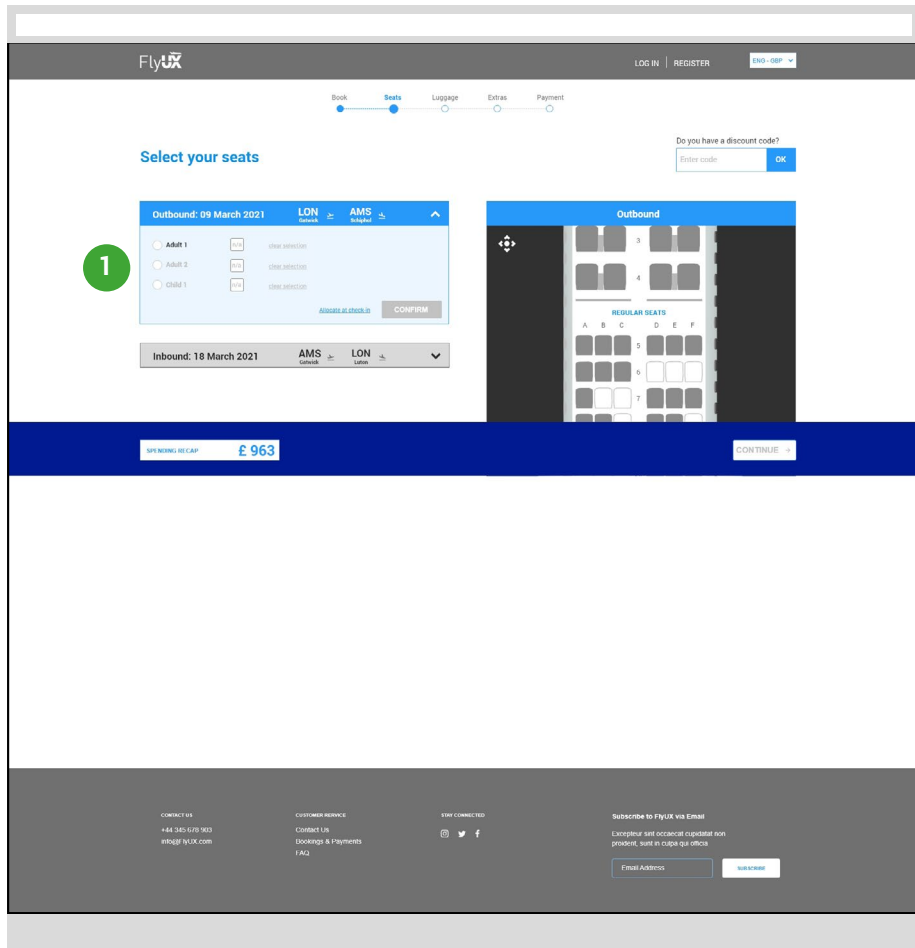

- When clicked, it opens horizontally expandable menu with list of potential options (Email, SMS, Whatsapp).

### 2. Share via Whatsapp:

- The button allow registered and guest users to share the results with others (no login required - TBC) by scanning a QR code (phone required)\*
- For users without a QR code Reader a unique link will be displayed.
- Supporting text will explain that prices may vary between the "screenshot" and the finalisation of the booking (confirmation before payment).

#### NOTE:

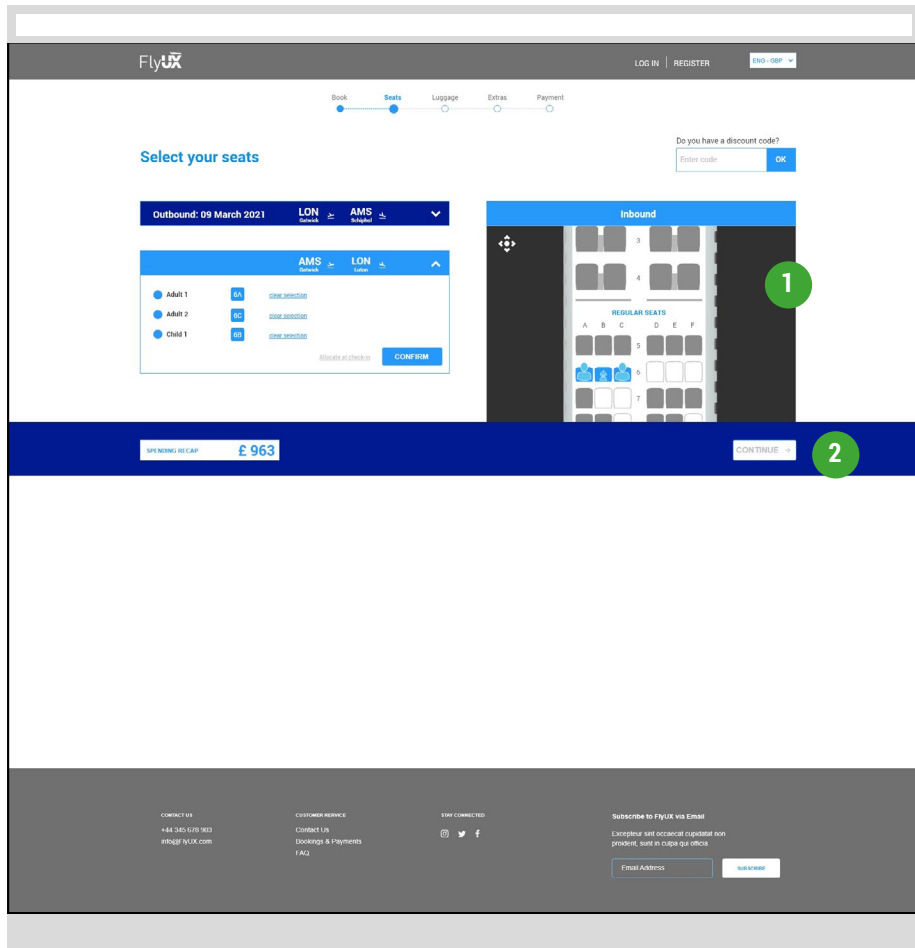

\* Future test needed to choose the format (screenshot image or weblink with details already populated minus number of passengers).

## FLIGHTS RECAP

### 1. Flight seats blocks:

- Default view on “Outbound” block open, with “Adult 1” checkbox active.
- By clicking on any available seat on the aircraft model, the selection will automatically move to Adult 2 and so forth.
- Users will be able to re-allocate seating by using the clear selection hyperlink before confirming and moving on to the Inbound seat block.
- Clear selection inactive until the corresponding seat is allocated.
- Additional link to automatically allocate seating at check-in (default: active - when seats are allocated: inactive).
- CONFIRM button inactive until all seats are allocated.
- If CONFIRM is clicked then minimise the block (change colour as completed) and expand Inbound block.
- User to repeat the same process for the Inbound flight.

## FLIGHTS RECAP

### 1. Aircraft model block:

- Interactive. User will be able to click and grab\* to navigate the aircraft or using the control on the top.
- Different colours for Available vs. Not Available seats.
- Model to include type of seating (e.g., Extra Legroom, seats close to emergency exits), if applicable, and display potential extra charges (Spending recap to update automatically).
- Selecting a seat will automatically change its status (separate icons for Adults and Infants) and populate the code (e.g., 6A) on the flight block.

### 2. CONTINUE button:

- Button inactive until seats for both flights are allocated.

#### NOTE:

\* Planned implementation to include walk-through hints (gifs overlay to disappear once the user clicks on the block) more UTs needed.
